ABSTRACT

➢ ABSTRACT:

E-commerce typically uses the web for at least a part of a transaction's life cycle although it may also use other technologies such as e-mail. E-commerce brings convenience for customers as they do not have to leave home and only need to browse websites online, especially for buying products which are not sold in nearby shops. It could help customers buy a wider range of products and save customers time.

Consumers also gain power through online shopping. Thanks to the practice of user-generated ratings and reviews from companies like Bazaar voice, Trust pilot, and Yelp, customers can also see what other people think of a product, and decide before buying if they want to spend money on it. Also, online shopping often provides sales promotion or discounts code, thus it is more price effective for customers.
